

ALDBROUGH ST JOHN SEWAGE TREATMENT WORKS UPGRADE

As part of the Water Industry National Environmental Programme (WINEP), we are investing £3.5 million to improve our treatment provision at Aldbrough sewage treatment works to improve the quality of effluent discharging to Aldbrough Beck and meet the demands of an increasing population in the wider catchment. The upgrade work will include the construction / installation of new inlet screens, primary settlement and storm treatment along with associated mechanical and electrical refurbishment. Our sewage treatment works aid NWL in improving the quality of rivers and coastal waters for the benefit of people, the environment and wildlife.
